

Job Description - Software Engineer

HireWise Technologies Inc. - Internal Human Resources Document

Position Overview

Job Title: Software Engineer

Department: Core Engineering & Platform Infrastructure

Location: Hybrid (2 days WFH / 3 days In-Office)

Employment Type: Full-Time

About the Role

We are looking for an ambitious and talented Software Engineer to design, develop, and scale high-performance microservices and backend APIs that power our next-generation hiring platform.

Required Skills & Qualifications

- Python: Strong proficiency in Python 3.x, OOP, clean architecture, and modern libraries.
- Java: Solid understanding of core Java, multithreading, and enterprise backend fundamentals.
- SQL & Databases: Proficiency in relational database design, query optimization, indexing, and PostgreSQL/MySQL.
- Git: Experience with Git version control, branching strategies, PR workflows, and code hygiene.
- REST APIs: Demonstrated experience designing, building, and documenting resilient RESTful APIs.
- Data Structures & Algorithms: Strong foundations in complexity analysis (Big-O), search, sorting, and graph/tree structures.

Preferred Skills

- Docker: Containerization, Dockerfile optimization, and multi-container setups.
- AWS: Cloud services experience with AWS ECS, S3, EC2, Lambda, or RDS.
- React: Familiarity with modern frontend development, TypeScript, and React hooks.
- CI/CD: Automated build and deployment pipelines using GitHub Actions or GitLab CI.
- Unit Testing: Strong commitment to test-driven development, pytest, JUnit, and mock frameworks.

Experience Requirements

- 1+ year of software development experience (including substantial software engineering internships or significant production-grade open-source/academic projects).

Key Responsibilities

- Design and develop robust, modular backend services and RESTful APIs.
- Optimize database schemas, queries, and caching mechanisms for scalability.
- Collaborate with cross-functional teams, participate in peer code reviews, and maintain clean Git branches.
- Debug complex production issues, profile latency bottlenecks, and ensure 99.9% uptime.
- Write comprehensive technical documentation and unit test suites.

Education Requirements

- Bachelor degree in Computer Science, Information Technology, or equivalent practical experience.
